

STALICO ENERGY BOX

The most economical STALICO compact generator!

The STALICO Energy Box is an independent power supply that is used where no power is available. This can also be placed when our GROUND SOLAR does not supply enough energy to the battery pack provided in our STALICO camera mast.

This Energy Box forms a beautiful whole with all our STALICO systems. Due to the economical consumption AND the automatic start / stop function, the Energy Box will only run until the battery is recharged.

The STALICO Energy Box can be connected to the battery pack or the STALICO SOLAR TOWER with batteries and can be combined with the MOBILE GROUND SOLAR.

Specifications

- Engine: Kubota Z482 3.2Kw 1500rpm water cooled
- Soundproof housing
- Consumption at 75% 0.7 l / h
- Power 230V 50Hz
- Continuous power 1.8 kW
- Diesel tank: 140 l gas oil
- Weight: 350 kg
- Dimensions: 123 x 65 x 131 cm
- Manual and automatic function via the Deep Sea controller and external start signal
- Remote monitoring
